

McAfee Active Virus Defense

Small Business Edition

Viruses Are Not Passive

Over the past two years, virus threats have become increasingly sophisticated. From Melissa, through Love Bug to Nimda and Code Red, these nasty pieces of malicious code are capable of re-occurring in networks where even one computer's protection is not completely up-to-date.

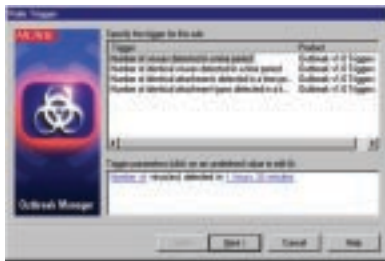

The most vulnerable groups of users are those with the least resources dedicated to anti-virus management—businesses with 250 users or less. Just when you think you have eradicated an outbreak, one rogue user who missed the update can cause more downtime and loss of productivity and damage to customer goodwill.

Effective management of your users is the key to effective anti-virus protection, but you don't have the time or resources to visit every desk in your organization once a week to ensure the weekly update was carried out. And when a new virus outbreak occurs, even weekly is too late. Such is the curse of managing IT in a small business.

McAfee can help.

Introducing ePolicy Orchestrator—Superhuman Help

It's an unpleasant fact of life that you cannot rely on your users to take a disciplined approach to using the IT resources at their disposal. They are only human, after all, and they will be tempted to click that enticing email link, or download files from unknown parts of the Internet. So if they are going to be human, then you need a superhuman tool to manage the consequences.

We call that tool ePolicy Orchestrator. It delivers the means to control your anti-virus applications. It gives you the power to enforce your chosen updating policy on all your users, and to monitor progress through easy to understand, dynamic graphical reports. ePolicy Orchestrator ensures that your users and your business are shielded from the ravages of viruses.

And when the nature of the virus threat changes, as it constantly will, ePolicy Orchestrator gives you the ability to change your updating or scanning policy. No more reliance on users to follow the rules. No more wondering whether everyone remembered to get their anti-virus updates. No more recurring infections of persistent viruses.

How You Get Superhuman

You will find ePolicy Orchestrator inside our Small Business Editions. To make it simple and affordable for small businesses to get anti-virus under control, McAfee has packaged ePolicy Orchestrator Small Business Edition inside two anti-virus solution bundles:

- Active VirusScan Suite Small Business Edition—VirusScan software for your workstations plus NetShield software for your NT & Netware servers, all managed by ePolicy Orchestrator Small Business Edition.
- Active Virus Defense Small Business Edition—The ultimate multi-tiered solution for total protection: VirusScan and NetShield software for your desktops and servers, plus GroupShield to preserve your Exchange or Notes servers and WebShield to strip viruses from your SMTP mail gateway. And, naturally, ePolicy Orchestrator Small Business Edition coordinates your defenses.

Key Features

- Superior detection and cleaning—because that's what it all comes down to, in the end.
- Policy Management—ePolicy Orchestrator enables administrators define, implement, and enforce a standard anti-virus policy.
- Enterprise-wide Reporting—ePolicy Orchestrator gives you unprecedented visibility into the state of virus protection on your network.
- Support—There's a PrimeSupport from McAfee offering for everyone, from online forums to 24x7 named contact.
- Multi-tier defense—McAfee products at every level of the network provide a bulletproof defense.

Active VirusScan Suite or Active Virus Defense?

Both our Small Business Editions provide you with excellent products for your workstations and servers—VirusScan and NetShield.

Desktop—Your first and last line of defense

Every desktop on the network represents several vectors of infection, or ways for viruses to enter the network. Floppy disks, CDs burned at home, personal email accounts, and PDAs are just a few of the routes a virus might take onto the network. That's why comprehensive, manageable desktop virus protection is essential. With more than 70 million users worldwide, VirusScan software is the protection of choice for desktops. Its tight integration with McAfee's ePolicy Orchestrator management console makes it the most manageable desktop anti-virus solution on the market today. And a host of installation and customization features make it a favorite of enterprise customers.

Server—The Petri Dish of Computer Viruses

File servers are extremely useful, productive tools. Their utility in collaboration and file storage makes them indispensable. But it also makes them a favorite hiding place for viruses. When Jane User's out-of-date desktop virus protection allows her to upload a virus infected document, all the other users who access that file can become infected. And if the IT team backs up the data on the server regularly, even the backups can wind up infected if they're not careful. McAfee's NetShield server protection can eliminate these potential headaches. It offers both real-time scanning to detect and clean viruses as files are accessed and on-demand scanning that allows scheduled deep-down bug scrubs of the entire system.

But there are two additional reasons you might want the total platform protection of Active Virus Defense.

The First Reason Is Your Internet Gateway

There's a reason the point at which your network connects to the Internet is called the Internet gateway: it's a point beyond which some things must not pass. That goes for inbound as well as outbound traffic. Because it's nearly impossible to get all the desktop PCs on your network 100% protected with updated anti-virus software, it's essential to protect your connection to the Internet. McAfee's WebShield Internet gateway virus protection solution can stop Internet email borne viruses before they get to even one user on the network, eliminating the risk that the virus will find that one PC that hasn't been updated. And content filtering capabilities can help kill time-wasting spam and virus hoaxes.

The Second Reason Is Your Email System

Of course, not every piece of data on a network enters through the Internet gateway. For keeping those email and collaborative environments virus free, McAfee's GroupShield products are just the ticket. With support for both Lotus Domino and Microsoft Exchange environments, GroupShield stands guard with an arsenal of anti-virus defenses. Outbreak Manager stops outbreaks before they start. Content filtering allows spam and hoax blocking, and can also help keep confidential data from leaving the network. All the most destructive viruses of the past three years used email to propagate. Don't let your groupware system become a tool for virus writers to use against you.

It's All About Detecting And Cleaning Viruses

At the end of the day, all the manageability and policy enforcement in the world won't stop a virus, if the anti-virus solution can't detect and clean viruses. All the McAfee Active Virus Defense components use the award-winning McAfee anti-virus scanning engine. With unique double heuristic scanning technology, generic variant detection capabilities, and industry-leading compressed file handling, the McAfee engine is the best money can buy.

Backed By One of The Best

Active Virus Defense is more than just software. It's a partnership with McAfee. With PrimeSupport from McAfee you can put advice and help from a live person at your fingertips 24 hours a day, 7 days a week. Essential product knowledge and rapid, reliable technical solutions exemplify PrimeSupport. Over 70% of our technical staff hold industry certifications and/or technical degrees and over 5.5 years of experience in the IT industry.

Active VirusScan Suite Small Business Edition Includes:

VirusScan

- Runs on Windows 95,98, Me, NT, 2000, XP; DOS; Linux; HP-UX; SCO; AIX; Solaris

VirusScan Thin Client

- Runs on Windows 95, 98, NT, 2000

NetShield

- Runs on Windows NT and 2000; NetWare

ePolicy Orchestrator Small Business Edition

- Manages anti-virus software only*

Active Virus Defense Small Business Edition Adds:

GroupShield

- Supports Microsoft Exchange and Lotus Domino

WebShield SMTP

WebShield for Solaris
